

3D-PHOTO 立體剪影畫

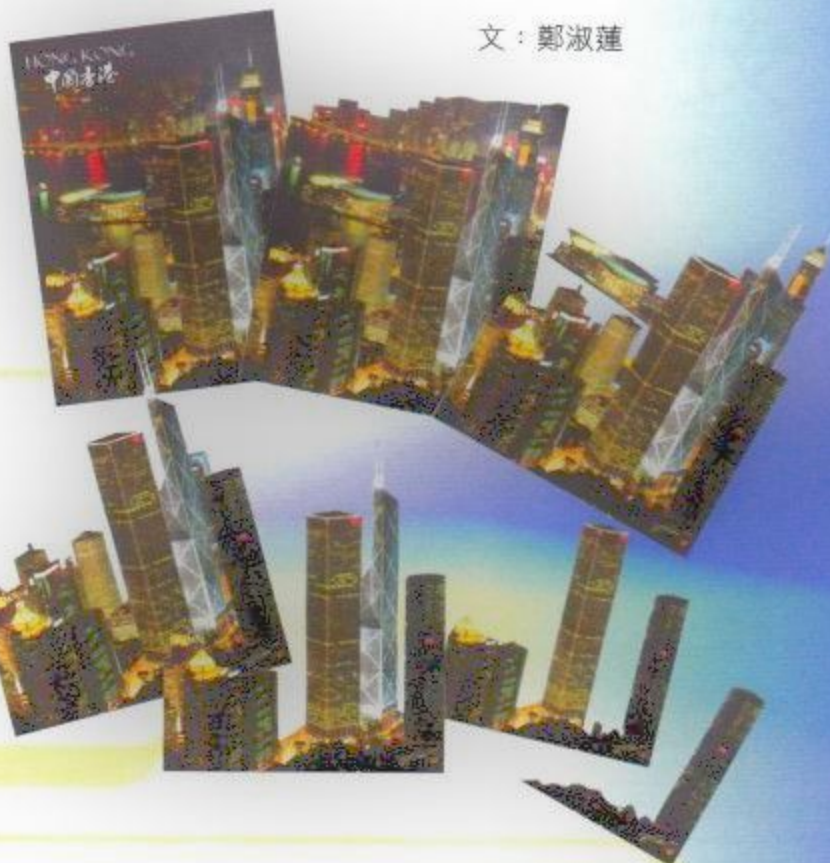

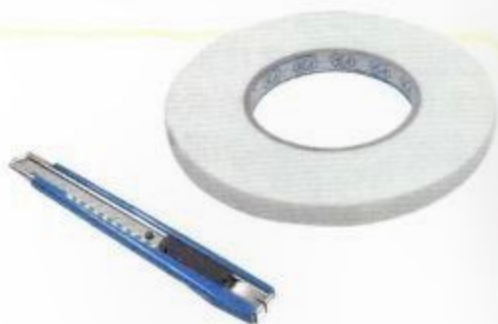

In this issue, DIY teaches you how to capture the happy moments of your Scouting days.

童軍歲月裡相信有不少精彩的相片，不妨挑選些較有層次感的，將它製作為一張剪影畫，重拾美好的回憶。

Material 材料

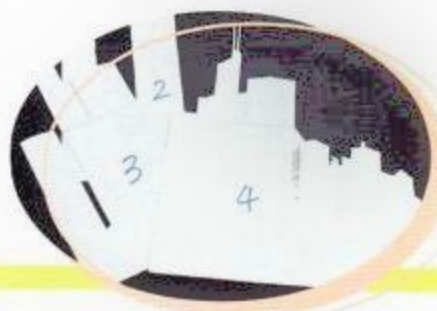

7 or more identical pictures or postcards, thick double side cellular tape, cutter.

7張或以上相同的相片或明信片，厚身雙面膠貼、剉刀

文：鄭淑蓮

Method 方法

1. Analysis the objects in the picture and classify them by reference to their distances into 7 groups.

首先了解圖片景物的結構層次，將景物以遠近分為7組。

2. Cut the objects out and mark numbers of 1 to 7 at their back with the small number for the nearest objects and the bigger numbers further away.

先剪出較近的景物，然後在背面寫上標記備用。由近至遠以1-7作標記。

3. Put together the 7 layers according to the number sequence with the uncut copy put at the bottom. 由近至遠，分別剪出下列7個不同層次，以最底一層完整的用作背景，不用剪裁。

4. Use thick double side cellular tape to stick the 7 layers together, with layer 1 on top and the background at the bottom.

用厚身雙面膠貼逐層黏貼，形成陰影（層次1放最上，背景那層放最底）。

5. Finally, place it in a frame to make it an interesting and vivid decor.

裝上畫框，便成一個既雅緻又生動的裝飾品。

小貼士：相片張數愈多，層次感愈高，遇合適的面層圖案，可將咭紙稍作彎曲以增加立體感。

Tips: The more picture layers you use, the more vivid the picture appears. Slightly bend the nearest objects in the picture may create a 3-dimensional look. ❀
